Age Distribution

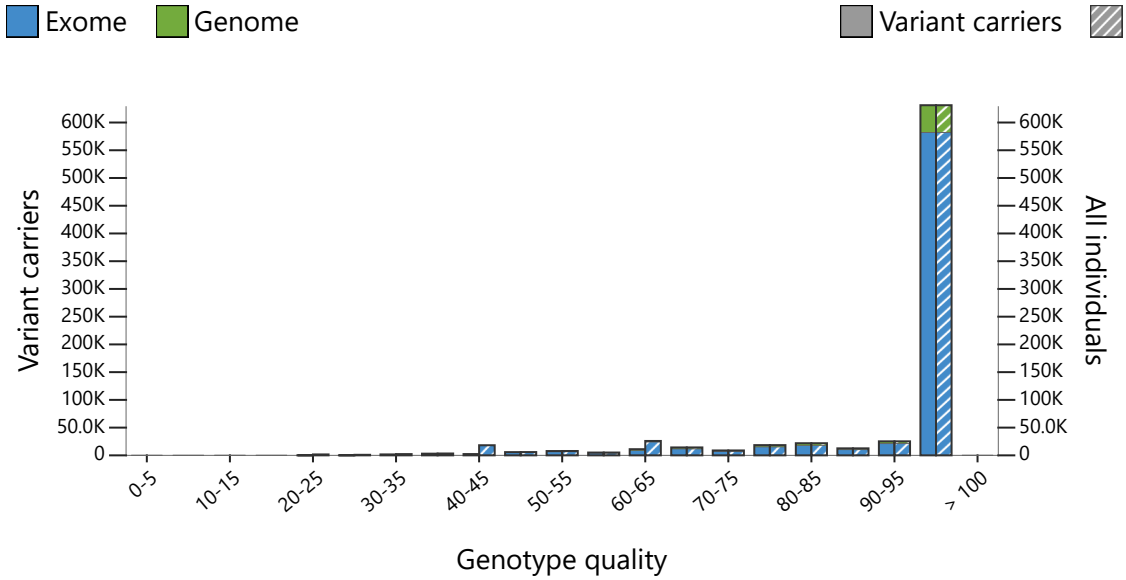

- [x] Include heterozygous variant carriers
- [x] Include homozygous variant carriers
- [x] Compare to all individuals

Sequencing types: Exome and Genome

Genotype Quality Metrics

Genotype quality | Depth | Allele balance for heterozygotes

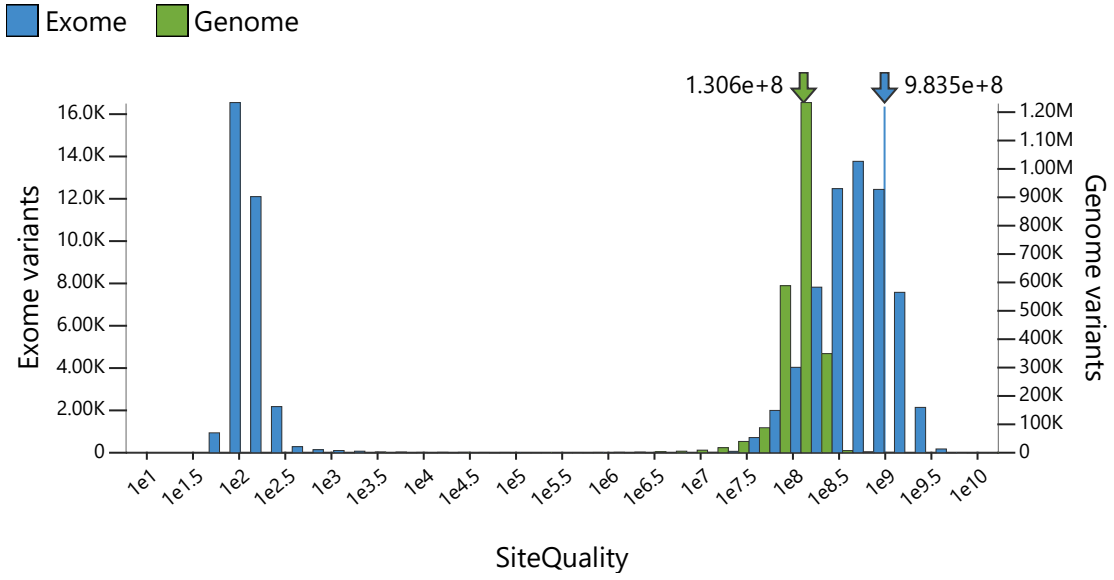

- [x] Compare to all individuals

Sequencing types: Exome and Genome

Site Quality Metrics

Metric distribution | All metric values

Metric: SiteQuality

Sequencing types: Exome and Genome

Value: 9.835e+8 (exome samples), 1.306e+8 (genome samples)

Site quality approximation for all variants with AF >= 0.5.

Note: These are site-level quality metrics, they may be unpredictable for multi-allelic sites.
